MOUNT STREET BRIDGE

The Battle of Mount Street Bridge virtual world is a 3D photorealistic construction of the area around Mount Street Bridge that transports users back to a leafy suburb in Dublin, Ireland, in April 1916 to better understand the spatial and temporal dimensions of one of the most important battles in the Easter Rising.

During this battle, the first of the week-long event, against all odds, a small group of Irish Volunteers held off two battalions of British soldiers for the better part of the day. The goal of the project is to better understand the battle, bringing new insights to this century-old event.

Contested Memories – Battle of Mount Street Bridge is a Digital Humanities project directed by Susan Schreibman and Costas Papadopoulos at Maastricht University.

25 Northumberland Road

25 Northumberland Road is a three-story terraced house in Mount Street, Dublin. It was built in 1845 and is a fine example of the Georgian style. The house has a red brick facade and a dark slate roof. It features a central entrance with a small porch and two side entrances. The house is surrounded by a garden and is a popular rental property.

Search Function Questions

To what levels can indexing go? E.g. Michael Malone

Advanced Search - 1. Checkbox for searching within scholarly editions 2. can new ones be automatically added to the list?

Can individual items within an edition be returned, separate from the edition?

How in depth should the qualifiers be for the advanced search? Does each article have its own object ID/persistent identifier?

Do we want a Wordpress like system whereby there is a multi-media gallery that you have to first upload your individual items which are then added into an edition? (in this case the viewer does matter). In such a way users can add metadata for individual items (that will be used for advanced search/indexing)

What about multi-media that is embedded or iframed (e.g. from youtube or sketchfab) into an html page? Do we want to allow this into the system or not (link rot)?

Edition Questions

Contact/Comment Form: per edition, per model and/or per article/annotation?

Is the 3D viewer embedded in a webpage or is the viewer the whole webpage?
